

YASH RAMESH LOKHANDE

Full Stack Developer · MERN Stack · Java Spring Boot · React.js · Node.js · Microservices

+91-7775058622 | yashlokhande20@gmail.com | linkedin.com/in/yash-lokhande | github.com/yashlokhande | yashlokhande.dev |
Pune, India

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with 2 years of experience designing, building, and deploying scalable web applications across the MERN stack (MongoDB, Express.js, React.js, Node.js) and Java Spring Boot ecosystems. Proven track record of delivering production-grade features — including a multi-tenant microservices platform, an end-to-end AI-powered content pipeline, and high-performance REST APIs — for an enterprise B2B SaaS product serving multiple clients. Skilled in building responsive React.js and Next.js frontends, designing secure JWT-authenticated REST APIs, optimising SQL and NoSQL databases, and managing Docker-based CI/CD deployments on cloud infrastructure. Experienced in Agile/Scrum collaboration with cross-functional teams including Product, QA, and UI/UX. Seeking full-stack or backend engineering roles in product-based or service-based companies.

TECHNICAL SKILLS

Frontend	React.js, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Ant Design, Redux Toolkit, Zustand, React Query, React Hooks, responsive design
Backend	Node.js, Express.js, Java, Spring Boot, Spring MVC, Spring Security, REST APIs, SOAP, Microservices, JWT Authentication, RBAC, OAuth 2.0, Hibernate / JPA
Databases	MongoDB, PostgreSQL, MySQL — schema design, query optimisation, indexing, aggregation pipelines, ORM (Mongoose, Hibernate), SQL joins and stored procedures
Cloud & DevOps	Docker, AWS (EC2, S3 basics), Microsoft Azure, CI/CD pipelines, GitHub Actions, Maven, Linux (Ubuntu), Tomcat, Kubernetes (fundamentals)
API & Integration	RESTful API design, API integration, Webhooks, Async processing, Postman, Swagger / OpenAPI, Slack API, Microsoft Teams Bot Framework, third-party API orchestration
Testing & Tools	JUnit, Jest, React Testing Library, Apache JMeter, Postman, unit testing, functional testing, load testing, Git, GitHub, JIRA, VS Code, IntelliJ IDEA, Agile/Scrum
Core Concepts	OOP, SOLID principles, MVC architecture, Data Structures & Algorithms, multi-tenant architecture, authentication & authorisation, SDLC, code review, technical documentation

PROFESSIONAL EXPERIENCE

Associate Software Developer (Full-Time) · **CoReCo Technologies Pvt Ltd** Feb 2025 – Present · Pune, India

UpTroop — AI-Powered B2B SaaS Enterprise Learning Platform · Stack: Java · Spring Boot · React.js · Next.js · TypeScript · Node.js · PostgreSQL · MongoDB · Docker · Azure

- ▶ **Developed** and maintained multiple Java Spring Boot microservices for a multi-tenant B2B SaaS platform — designed REST API contracts, implemented business logic layers, managed JSON/XML data exchange between services, and ensured service resilience for 4–10 active enterprise clients.
- ▶ **Re-architected** the Slack and Microsoft Teams bot infrastructure from single-tenant to a schema-based multi-tenant architecture — implemented dynamic credential resolution and per-client Azure Blob Storage partitioning, enabling multiple enterprise client onboarding on shared infrastructure with zero cross-tenant data exposure.
- ▶ **Engineered** an end-to-end AI content creation pipeline integrating 6+ third-party REST APIs (avatar generation, multilingual TTS, background music, font rendering, slide assembly, video generation) with async processing and real-time status tracking — reduced enterprise trainer content production time by ~60%.
- ▶ **Built and optimised** React.js and Next.js frontend modules with TypeScript, managing complex application state using Zustand and Redux Toolkit; applied memoization, lazy loading, and code-splitting to maintain Lighthouse performance scores above 85 and sub-200ms UI interaction times.
- ▶ **Improved** PostgreSQL API response times by 30% (800ms → 560ms) across 3 high-traffic endpoints by profiling N+1 query patterns with EXPLAIN ANALYZE, introducing composite indexes, and rewriting inefficient SQL joins — directly improving user-facing page load performance.

- ▶ **Implemented** JWT-based authentication and Role-Based Access Control (RBAC) across Spring Boot and Node.js APIs — implemented token validation, role-resolver middleware, and secure session management forming the platform's core security layer.
- ▶ **Wrote** unit test cases and functional test cases for Spring Boot REST services using JUnit; conducted load and stress testing using Apache JMeter at 500 concurrent users, identifying and resolving 3 production-blocking performance bottlenecks before deployment.
- ▶ **Collaborated** directly with QA, Product, and UI/UX teams in daily Agile standup meetings, sprint planning, and code reviews; delivered features end-to-end from requirement analysis through production deployment with full ownership.

Software Engineering Intern · CoReCo Technologies Pvt Ltd

Jul 2024 – Jan 2025 · Pune, India

UpTrop Platform · Stack: Spring Boot · React.js · Node.js · JWT · PostgreSQL · MongoDB · Ant Design · Tailwind CSS

- ▶ **Designed and implemented** JWT-based authentication and RBAC in Spring Boot, establishing the API security layer used across all platform endpoints.
- ▶ **Shipped** a reusable React.js + Ant Design + Tailwind CSS component library independently, adopted across 4+ platform modules and reducing UI development time for the team.
- ▶ **Architected** initial Slack and Microsoft Teams bot REST integrations — webhook routing, JSON event parsing, OAuth token management — that became the foundation for the multi-tenant architecture shipped in the full-time role.
- ▶ **Delivered** REST API integrations for AI content features: multimedia slide generation API, quiz engine, Markdown editor, and initial LLM-based content generation hooks.
- ▶ **Debugged and resolved** 15+ critical bugs in production REST API endpoints and frontend validation flows; reduced user-reported errors measurably and unblocked QA sign-off on two major release milestones.

PROJECTS

Tweetertube — MERN Stack Social Media Platform

| github.com/yashlokhande/tweetertube MongoDB · Express.js · React.js

· Node.js · JWT · REST APIs · Docker

- ▶ **Architected** full-stack social platform with tweets, video subscriptions, nested comments, and personalised feeds; MongoDB aggregation pipelines with compound indexing handle 50K+ document reads at sub-100ms response — schema designed for horizontal scalability.
- ▶ **Implemented** secure REST API layer with JWT authentication, RBAC, rate limiting, and input sanitisation; containerised with Docker and deployed to cloud environment with CI/CD pipeline.
- ▶ **Built** React.js frontend with Redux state management, lazy loading, and code-splitting; integrated real-time UI updates with optimistic rendering for improved perceived performance.

Spring Boot E-Commerce REST API

| github.com/yashlokhande/springboot-ecommerce Java · Spring Boot · Spring Security ·

MySQL · JWT · Maven · Docker · AWS EC2

- ▶ **Built** a scalable RESTful API for an e-commerce platform using Java Spring Boot — implemented product management, order processing, inventory tracking, and user management modules with clean MVC architecture and Hibernate/JPA for MySQL ORM.
- ▶ **Implemented** JWT-based authentication with Spring Security, role-based access for customer/admin/vendor roles, and OAuth 2.0 integration for third-party login.
- ▶ **Packaged** with Maven, containerised using Docker, and deployed to AWS EC2; configured environment-specific application properties for Dev/Staging/Production.
- ▶ **Wrote** unit tests with JUnit and Mockito achieving 80%+ code coverage; integrated Swagger / OpenAPI for automated API documentation.

EDUCATION

B.Tech — Computer Science Engineering

Jun 2020 – May 2024

Marathwada Institute of Technology, Aurangabad | CGPA: 7.9 / 10

CERTIFICATIONS & ACHIEVEMENTS

- ▶ Best Employee Award — CoReCo Technologies, 2025 — recognised for full-stack ownership, microservice delivery, and measurable production impact within the first year.
- ▶ 500+ LeetCode problems solved (arrays, graphs, DP, trees, SQL, sliding window); completed 100 Days of Coding Challenge — strong DSA foundation in Java and JavaScript.
